ULTRA ROBUST RECORDER

UniGuard.com.au

The UniGuard Ultra Robust recorder is a rugged, tough and long-lasting recorder unit which will log data of various scanned probe points. It holds over 4,000 hits in its internal memory and has a large variety of anti-vandal features such as shock resistance, watertight casing, microwave proof casing, extreme temperature resistance. It comes with a long-life lithium battery which is guaranteed to last for over five years. Replaced for free if it runs out before this period.

ULTRA ROBUST SUPERVISOR

UniGuard.com.au

The UniGuard Ultra Robust Supervisor recorder is a data logger that is also a mobile downloading unit, it shares all the rugged anti-vandal features of the Ultra robust recorder, and also has an increased internal memory capacity of over 32,000 hits. Its' ability to download other recorders into its internal memory whithin seconds by simply touching makes this unit a unique and innovative new idea in the industry.

VALUMATE2 LIGHTWEIGHT

UniGuard.com.au

The Valumate2 Lightweight recorder is a solution designed primarily for the cleaning industry, however adapted into many security environments where the more rugged anti-vandal features of the Ultra series are not necessary. This inexpensive recorder is just ten centimetres in length and weights 110grams.

What is UniGuard?

UniGuard Patrol Management Systems will keep tabs of your staff's movements through the course of their shift. Through simple but effective technology, all the staff member needs to do is touch a small metal button with the tip of the probe, listen for the beep or look for the flash upon contact, and move on!

UniGuard Systems are easy to install and easy to use. More importantly, they can be customized to be completely automated, freeing up valuable time for your operators to focus on other, more important tasks.

The new UniGuard LIVE software is designed to do the job of an officer that is dedicated to the system. UniGuard LIVE will automatically import data from the field in its own inbox and generate reports to a schedule as well as e-mail the reports automatically to your clients according to the schedule that you put in. If an exception is detected, UniGuard 11 LIVE will automatically create an issue for a manager to track and resolve. UniGuard 11 LIVE does the work of a full time employee.

How UniGuard **LIVE** works

1. Touch a button out on site

2. Download recorder

3. UniGuard silently emails import data to your head office

4. UniGuard LIVE on your head office will process received data and generate reports automatically then email them out to your clients without user interaction

L I V E

UniGuard 11 LIVE can be scheduled to automatically generate reports

Multiple reports can be scheduled at different times to be automatically sent to different people. The receiving persons could be managers from within the organization for their scrutiny, or reports could be sent straight to the client themselves.

No more manual importation of data

UniGuard 11 **LIVE** has now totally eliminated this chore by introducing a new automated feature that UniGuard's own inbox for e-mails. Any other attachments sent to that e-mail are stored into a separate folder for later inspection.

Customizable reports

All UniGuard 11 reports are fully customizable, including, column type, sorting and subsorting of information. You can specify which columns you want in a report as well as their position. Your company logo can still be included at the top of each report, to give that extra professional finish to your client.

Filtering is present on all reports.

Issue Tracking

Issue tracking is a new feature that gives specialised attention to areas such as dangerous goods. Issues are problems that arise during the management of customer sites. They can be entered into the system manually by operators or automatically by exceptions generated during Scheduled Reports.

These issues can then be traced and tracked, adding details and actions until resolved.

There are 2 views for issues. The Issue Listing which is a grouped list of the issues, and Issue Cards which is the same data, but each record is organized as a detailed card which is more suitable when printing.

Issues can be globally filtered by selecting to display All Issues, Resolved Issues or Unresolved Issues.

Silent Remote Send

This feature will allow any version of UniGuard11 to automatically startup and hide itself on system startup.

It will then sit quietly in the background and monitor the downloader.

Once it detects a wand, it will promptly process the wand and data and automatically and silently e-mail the information to your head office with absolutely no interruptions to the terminal user.

There is much more to UniGuard 11...
